II Oct 26

XXXXXXXXXX

(I) You might call it "generalized instrumentalism." I need to read more Dewey. I come more from Heidegger and James. I sometimes call it "cynical neopragmatism" or "dialogical positivism." I like making up names. They are labels on the package to manage expectation.

(2) I prefer the earlier work of Heidegger so far, starting in 1919. I like to read Heidegger as the "true positivist." Excavate prejudice. Phenomenological destruction. The earlier stuff gets translated into a more likable English. I give a fuck about style.
(3) So far, I dont approach philosphy as a "scholar" (academic.) But I would if someone would pay me. I dont expect anyone to do this. But please send me money.
(4) I could start here or start there. I start this time with belief. Belief is the "shape" of conduct. I do my belief.

(5) I hurry up the stairs to answer a ringing phone. I dont "think" my trust in the stairs. I "believe" in the stairs with my legs.
(6) Harman might call this "tool-being" of the stairs.

(7) I "take things for granted" as means. I use one thing "blindy" in order to get to the thing I "see."
(8) The ringing phone is "foregrounded." The stairs are "hardly there." I blindly count on the "action" of the stairs.

(9) I am"only paraphrasing" Heidegger. Or creatively translating. I am trying to build a lingo up from scratch, relative to the standard Heidgger jargon. That jargon isnt bad. But I hope I am fusing Heidegger with other influences. So far tho it's just pragmatist Heidegger. I mean I havent got to the other stuff.
(9) So I leg-do and hand-do my belief. I sometimes chain noises together to do my belief. But belief is not "thought stuff." We dont need the old ghost story.
(IO) We dont need "true" to be a deep property of this or that claim. We dont need "truth." We turn up our noses at the phrase "objective reality.

(II) The environment is shared but also "from POV." This environment is the world, reality, etc. The umvelt.
(I2) The shared world is world-for-specific--animal. I heard the phone ring and ran up the stairs. "I" heard the phone ring. "You" were far away.
(I3) Mach is helpful here. We reject the "inside/outside" framework. The world is "for-me" but not therefore inside my "mind,"
(I4) Experience is "reality itself" but "for" a particular "conscious" animal
(I5) I claim that we already do this belief.
(I6) But philosopher inherit and maintain a tradition of "floating-mouth belief."
(I7) The floating mouth verbalizes "toy belief" that the ~~xxx~~ rest of the animal doesnt do.
(I8) So the mouth "gets away" from the talker as a whole, and only when a certain "theological" game is being played. Its like checkers.
(I9) For instance, the "holy" prestige of physics is blindly counted on as a means to spout metaphysicks. Note the "k."
(20) Im a "positivist" so for me "metaphysics" expresses disvalue.
(2I) I say that "consciousness is being." Which is ontological, if you like. Im ambivalent about these old Greek-sourced words. I use "formal indications." I try to point with marks at a feature of our shared world that I hope you can notice (find) w/ help from these pointing marks.

II Oct 26

(22) "Phenomenology is a helpless pointing." The indicator is "formal" because the mark (sign) is not stuffed with "meaning." The sign is ... empty. Or "empty." The noise "help" has its "meaning" in the world between us. We perform this "meaning" together. I rush over in response to this "repeatable" noise. That rushing over is the "meaning."
(23) I also "experience significanee." I quietly read and I am changed. I conduct myself differently. I respond much later to the "same" situation differently. I may only barf up different noises, different "toy beliefs."
(24) I am saying that verbal belief is "grounded in" nonverbal conduct. No dualism. No "ghost" in the pineal gland. No "internal images" either.
(25) The object is an "ideal manifold" of its "moments." It is a "system of faces." It is a temporal intersubjective synthesis.
(26) Consciousness is the "being" or "presence" of objects in terms of their moments, faces, aspects.
(27) The aspect is not usually thematized as such. The object itself is usually not thematized.
(28) I hurry up the stairs. This staircase is not thematic. But it was dimly there for me in terms of my particular legs and vision. The light was low or very bright. I hurried up the stairs inI999 or 2026.
(29) Kant saw this but spoke of synthesizing perceptions. This is OK except that he was trapped in dualism. Perceptions for him were "inside stuff."
(30) We can fix him. The "thing in itself" is the enacted unity of the thing.
(31) Husserl was a key influence on me. An "adumbration" of a spatial object can be generalized. This gives us the "moments" of an object.
(32) The thing as a whole cannot be squeezed into a single moment.
(33) To "share" things with other "subjects" is to only ever have a "perspectival fragment" in a given here-and-now.
(34) Every aspect occludes. The specifity of manifestation is exclusive.
specificity
(35) The thing is only there by mostly not being there.
(36) The thing is "mostly in the future."
(37) We can get most of this from Husserl, but Husserl is sort of ..anti-pragmatic. Husserl loves/is theory. Detached srene pure seeing.
(38) Husserl just wants to sniff atemporal essences.
(39) I love Husserl, so I am..."joking."
(40) Returning to Heidegger and Harman, objects are mostly non-thematic.
(41) Objects are "instruments" blindly employed.
(42) We operate on objects. Theory ("pure" seeing) is by far the exception.
(43) "Power is knowledge." The floating mouth says we are "Euclidean" detectors of "valid" or "true" verbal beliefs. Pretense of top-down control. I say we are convinced by "power."
(44) We are trained like dogs by environmental feedbak.

---

(45) Pleasure, pain. The "value" structure. Toward her beautiful face. Away from the stinking rotting squirrel.

(46) "I dont drink that hard stuff anymore. It fucks me up."
(47) Our leg-belief in the "battle-tested" is ..."irrational" --for the "Euclidean type" who wants a verbal "proof" that a verbal "foundation" is secure. Hume on induction. We just fucking do it.
(48) We expect the "incoming"to be sort of like what is "behind" us.
(49) We can get good at distinguishing "cause" and "just correlation." In other words, we can fine-tune our expectations, to the degree that they are explicit and optional.
(50) Expectation is primarily automatic --- we cant even "see" it. We just blindly do it.
